

ELECON Secondments IFSC -> IPP

Porto, June 2013

The first secondment from IFSC to IPP occurred at June 2013. Within this secondment Prof. Rubiapiara Fernandes, Prof. Samuel Abreu and Prof Ademar Rosa visited IPP and Gecad installations and laboratories.

It was a very profitable visit, where we had the chance to strengthening collaboration already started in IPP secondment to IFSC during April/May.

There were some seminars that illustrated the research activities at Gecad, namely concerning consumers' characterization, through Data Mining techniques, and Demand Response, and some of the tools under development and improvement such as the markets simulators MASCEM and Masgrip; the electrical vehicles scenario simulator EVESSi; the strategic bidding system ALBidS and ViProd, a tool for Virtual Power Producers simulation.

Besides their presentation, the tools were available at our laboratories and some demos took place.

This was a very fruitful secondment, important to clarify the type of data available from both countries and to establish new common tasks to meet project milestones.
